

The New Standard in Body Composition Analysis

BODY COMPOSITION ANALYZER
Multi-Frequency Segmental Body Composition Analysis
using BIA Technology

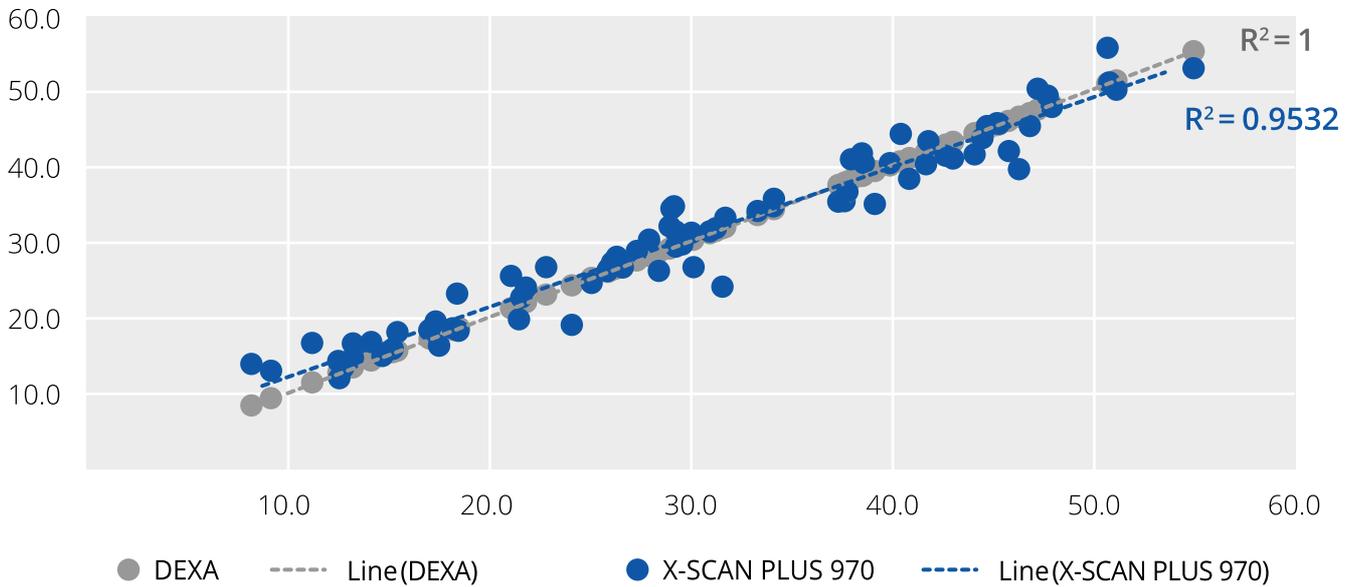

ACCUNIQ Technology

High Consistency with DEXA

The methods of analyzing your body composition include computed tomography(CT), magnetic resonance imaging(MRI), and underwater weighing. Dual-energy X-ray absorptiometry (DEXA) is currently considered the gold standard since it accurately analysis your fat, muscles, and bones with low radiation exposure.

ACCUNIQ conducted clinical tests with IHT, a professional clinical organization based in texas, USA, to verify our products precision with DEXA. The result shows that our analysis is more accurate than our competitors.
